Very happy with Radiant Pool,

Date:August 17, 2013

By Eric S

from Mendon, MA

" We purchased a 24' round radiant metric pool on line. It was delivered promptly via tractor trailer with lift gate. The Radiant Pool is amazing. I self installed semi-in ground. The excavation, surveying and leveling/stepping of the ground took a 4 weekends time. But the assembly of the pool was as advertised. Less than 1 full day, no trouble at all. We installed a salt system, solar cover, and finished with a flush limestone block patio. The patio was the most work of the entire project. It looks professional. Most importantly, the insulated walls DO work. The water is WAY warmer than my previous pool ever was, temps in the 80s-90s all summer, even with the nights in August in Mass being in the upper 50s/lower 60s. We cover it nightly. Friends are amazed at the water temp. The insulated walls alone make this pool great. The ability to partially bury on a slope is the icing. As a straight above ground, installation would be a cinch. Very very happy. Solid product. They need to advertise this pool more. "

well worth the money,

Date:June 1, 2012

By the pool guy

from Duryea,Pa

" My wife and I considered several options before buying a pool this year. After weighing all the options, this was the best choice we think we could have made. Set up is just as easy as they claim. We had it up in about an hour, just the two of us. The quality is outstanding. My neighbors and friends and family are amazed at the construction materials used to make this pool. I get more questions everytime someone sees it. I have recommended this pool to everyone I know who is replacing or thinking of buying a pool. "

Radiant Pool,

Date:March 12, 2011

By skibum

from Rochester MN

" I wanted a quality pool that would not fall down from winter damage. It was the second pool I built and it is a perfect Do It Yourself. Well worth the additional money. "

Radiant pool,

Date:July 26, 2010

By sornegl

from Stuarts Draft, Virginia

" I have had several above ground pools over the years. In preparation for retirement, we researched the web for pools and decided the 21' Above Ground Radiant Pool would be the best choice for our needs and area. Ordering was easy and delivery made in 10 business days. I obtained the services of a private pool installer with 30 plus years experience for installation. He and his two assistants had never heard of a Radiant pool and obtained helpful installation tips from the company on the day of installation. This included an OK for my request of a deeper center section of 5 feet to allow water circulation send debris to the center for quick collection.

After site preparation and sand delivery, the pool walls went up in less than 30 minutes. The following day I assisted installing the liner which took less than 5 minutes. The liner adjusted to the depth changes as stated by the manufacturer. Our installer added additional aluminum screws to the top lip of the pool as he felt the amount supplied was not nearly enough to prevent slippage.

On completion, the contractor stated "...This is the easiest above ground pool I've ever installed. The only thing I would change would be more screws than supplied for the top lip. If I was going to sell pools, this would be the one I would sell...". He also made contacts with local pool businesses to come out and take a look. We've had two businesses to contact and stop by. Also, there have been three acquaintances to look at the pool. One is installing hers this week.

The pool walls assist in heating the water as advertised with water temperature averaging 85 degrees. When first added, the water was 64 degrees when full. The next day it was 78 degrees. Last week, we were on vacation and I left the solar cover on for a week. The temperature was 102 degrees!

Although the ad indicates 2 can install in less than a day, I would recommend having more assistance. If you plan to have a sand bottom under the liner, plan on one and a half days for completion. Also, a couple of extra boxes of aluminum screws for the top rail is suggested. Lastly, unless you want water temperatures in the 90's, avoid leaving a solar cover on for an extended period of time. "
